MASTER INDEX TO VOLUMES 91–100A

NORTH-HOLLAND AMSTERDAM

PHYSICS LETTERS A

A journal devoted to the rapid publication of letters in the fields of *General Physics, General Relativity and Gravitation, Atomic and Molecular Physics, Plasma and Fluid Physics, Condensed Matter and Cross-Disciplinary Physics.*

Editors: D. Bloch, *Grenoble*; J.I. Budnick, *Storrs*; G.W. Gibbons, *Cambridge*; D. ter Haar, *Oxford*; A.A. Maradudin, *Irvine*; M.R.C. McDowell, *London*; F. Troyon, *Lausanne*.

INSTRUCTIONS TO CONTRIBUTORS TO PHYSICS LETTERS A

Submission: Contributions, written in English, French or German, should be sent to:
Physics Letters, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), Honthorststraat 6, 1071 DD Amsterdam, The Netherlands.
Authors in the Americas of papers on condensed matter physics may also send their manuscripts directly to:
J.I. Budnick, Department of Physics, University of Connecticut, Storrs, CT 06268, USA,
for papers in experimental condensed matter physics, or to:
A.A. Maradudin, Department of Physics, University of California, Irvine, CA 92717, USA,
for papers in theoretical condensed matter physics.
The manuscripts should be submitted in duplicate, one copy of which is the typewritten original. Authors are requested to indicate on the manuscript the appropriate category of their paper following the ICSU classification scheme (see end of each volume).
By submitting a paper for publication in Physics Letters the authors imply that the paper has not been published previously nor has been submitted for publication elsewhere.
Manuscripts should be typed on one side of the paper, with double spacing and a wide margin. The title page should contain title, author(s), address(es) and abstract. The main text should start on a new page.
The *length* of the letters should not normally be more than three pages in print. An *abstract* of less than 50 words is required.
The drawings for the *figures* must be submitted on separate sheets, drawn in black India ink and carefully lettered (with the use of stencil), in such a way that they can be reduced to a one-column width. Sharp and contrasty glossy prints are also acceptable. If requested, original drawings will be returned to the author(s) upon publication of the paper.
Corrections and modifications. Once the paper has been accepted for publication, minor corrections should be sent directly to the publisher (see below). Extensive modifications should be sent to the editor, while the publisher should be notified to hold publication. Authors may be charged with the costs of necessary retypesetting.
After acceptance of the paper for publication, all further correspondence (except extensive modifications, see above) should be sent to the publisher, and not to the editors (Drs. H.A. Arends, Editorial Department, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), Honthorststraat 6, 1071 DD Amsterdam, The Netherlands; telephone number (020) 762013).
More elaborate instructions to authors can be found at the end of each volume.

SUBSCRIPTIONS

Sections A and B of PHYSICS LETTERS will each be published weekly. The subscription price of a volume of Physics Letters is Dfl. 205.00 (approx. $82.00) plus Dfl. 21.00 (approx. $8.40) handling and mailing costs. For 1984 7 volumes Physics Letters A at a total subscription price of Dfl. 1582.00 (approx. $632.80) including handling and mailing costs, and 13 volumes Physics Letters B at a total subscription price of Dfl. 2938.00 (approx. $1175.20) including handling and mailing costs, are announced.
PHYSICS REPORTS will be published approximately weekly. The subscription price of a volume of Physics Reports is Dfl. 205.00 (approx. $82.00) plus Dfl. 21.00 (approx. $8.40) handling and mailing costs. For 1984 12 volumes Physics Reports are announced at a total subscription price of Dfl. 2712.00 (approx. $1084.80) including handling and mailing costs.
The reduced combined subscription price for 20 volumes Physics Letters and 12 volumes Physics Reports is Dfl. 6272.00 (approx. $2508.80) including handling and mailing costs.

Subscriptions may be sent to your subscription-agent, bookseller or to the publisher: ELSEVIER SCIENCE PUBLISHERS B.V., Journals Department, P.O. Box 211, 1000 AE AMSTERDAM, THE NETHERLANDS.
Claims for missing numbers should be made within two months following the date of publication. The publisher expects to supply missing numbers free only when losses have been sustained in transit and when stock will permit.

No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.
Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S.351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US $ 2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

MODERN PROBLEMS IN CONDENSED MATTER SCIENCES

Volume 4: Spectroscopy and Excitation Dynamics of Condensed Molecular Systems

edited by V.M. AGRANOVICH, *Institute of Spectroscopy, USSR Academy of Sciences, Moscow, U.S.S.R. and* ROBIN M. HOCHSTRASSER, *University of Pennsylvania, Philadelphia, U.S.A.*

1983 xii + 702 pages Price: US $166.00/Dfl. 390.00 ISBN 0-444-86313-3
Subscription price: US $142.50/Dfl. 335.00

This volume is concerned with spectroscopy and energy transfer in organic crystals and glasses. New methods and their related theories are presented and in addition the most recent results on complex molecular systems are discussed by Eastern and Western authors. Recent important topics such as photon echoes, holeburning, line-narrowing, and non-linear spectroscopy are included, as are front line discussions on energy transport, percolation, the theories of energy redistribution in solids, and on the properties of charge transfer states.

Contents: preface. **Chapters 1.** Theories of Energy Transport *(R. Silbey).* **2.** Excitions and Polarons in Organic Weak Charge Transfer Crystals *(D. Haarer and M.R. Philpott).* **3.** Biphonons and Fermi-resonances in Vibrational Spectra of Solids *(V.M. Agranovich).* **4.** Energy Transport in Mixed Molecular Crystals *(R. Kopelman).* **5.** Exciton Coherence *(M.D. Fayer).* **6.** Theory and Experimental Aspects of Photon Echoes in Molecular Solids *(W.H. Hesselink and D.A. Wiersma).* **7.** Nonlinear Laser Spectroscopy and Dephasing of Molecules: An Experimental and Theoretical Overview *(M.J. Burns, W.K. Liu and A.H. Zewail).* **8.** Theory of Light Absorption and Emission by Organic Impurity Centers *(I.S. Osad'ko).* **9.** Persistent Nonphotochemical Hole Burning and the Dephasing of Impurity Electronic Transitions in Organic Glasses *(G.J. Small).* **10.** Site Selection Spectroscopy of Complex Molecules in Solutions and Its Applications *(R.I. Personov).* **11.** Effects of Electric Fields on the Spectroscopic Properties of Molecular Solids *(D.M. Hanson et al.).*

Volume 6
Electron-Hole Droplets in Semiconductors
edited by C.D. Jeffries *and* L.V. Keldysh

Volume 5
Light Scattering Near Phase Transitions
edited by H.Z. Cummins *and* A.P. Levanyuk

Volume 3
Electronic Excitation Energy Transfer in Condensed Matter
by V.M. Agranovich *and* M.D. Galanin

Volume 2
Excitons
edited by E.I. Rashba *and* M.D. Sturge

Volume 1
Surface Polaritons
edited by V.M. Agranovich *and* D.L. Mills

DEFECTS IN SOLIDS, Volume 13

Radiation Effects Computer Experiments

by J.R. BEELER Jr., *North Carolina State University, NC, U.S.A*

1983 xviii + 882 Price: US $168.00/Dfl.395.000 ISBN 0-444-86315-x

This book is intended as an introductory handbook, and as a guide for people wishing to learn how to develop and use computer experiment programs to simulate defect production and annealing in solids. Each particular computer experiment approach described has been proved in practice by several competing computer experimenters. Both the functional structure and procedure for the use of these approaches is easily understood.

Historically, radiation effects theory has tended to concentrate on either the primary production of Frenkel pairs by a collision cascade or the diffusion of 'free' defects to various sinks long after the primary defect production events have occurred. The intermediate regime is seldom treated. During the intermediate regime,

(1) some defects collected into clusters,
(2) a large fraction of the defects produced is annihilated, and
(3) a small minority emerges as mobile (free) defects, sufficiently far from their origins to have forgotten their native regions.

This regime, called short-term annealing Ion Implantation, is covered in detail in this book and is held as being equal in importance to the primary defect production process.

CONTENTS: Chapters: 1. Introduction. 2. Computer Experiment Methods. 3. Outline of Defect Properties Computations. 4. Vacancies and Divacancies. 5. Self Interstitials. 6. Impurity Atoms. 7. Defect Migration. 8. Vacancy Clusters. 9. Interstitial Clusters. 10. Isolated Frenkel Pair Production. 11. Binary Collision Approximation Cascade Program Construction. 12. Collision Cascades and Displacement Spikes. 13. Defect Annealing Program Construction: The RINGO Program. 14. Defect Annealing Simulation. 15. Electron Irradiation Simulation. 16. Self-Ion Irradiation.
